Dushow delivers end-to-end solution technical for Global Citizen Live Paris

January 1, 2022 / roger

Dushow group hosts global superstars à la française for concert calling for action to defend the planet and defeat poverty.

Dushow, one of Europe's leading AV and technical production specialists, recently helped deliver the world's biggest concert, Global Citizen Live, as lead technical partner for the Global Citizen Live event in Paris.

Serving as the main official service provider for the broadcast event – which featured Ed Sheeran, Elton John, Black Eyed Peas, Christine and the Queens, Doja Cat and Måneskin, as well as special guest performances by Angélique Kidjo, Charlie Puth and Fatma Said, and raised more than US\$1bn to fight climate change, famine and vaccine inequity – Dushow partnered with its video-specialist subsidiary, Alabama, and sister company Magnum to deliver a complete technical solution encompassing audio, LED, lighting, video, cabling and power. This tour de force was made possible thanks to the wider Novelty Magnum Dushow group offering organisers a single point of contact for the complex 20,000-person show.

This year, as part of its 'Recovery Plan for the World' – a year-long campaign calling on governments, philanthropists and the private sector to commit financially to helping the world beat Covid-19, including funding 1bn vaccines for the poorest countries – Global Citizen planned its biggest and most ambitious show to date: Global Citizen Live 2021, a 24-hour broadcast event featuring live events across seven continents. Screened live simultaneously from cities including New York, London, Rio de Janeiro, Sydney, Seoul, Los Angeles, Mumbai and Paris. 25 September's Global Citizen Live was 'the closest thing to Live Aid in the streaming age', said John Taylor of Duran Duran, who performed at both events (in Philadelphia in 1985 and London in 2021).

Global Citizen Live Paris was staged in the heart of Paris, taking over the Champs de Mars and utilising the iconic Eiffel Tower as a spectacular backdrop.

In Paris, Stéphanie Nicolas of ULTD EVENEMENTS – who has worked on more than 30 shows on the Champ de Mars – was brought in as site director. Angelo Gopee, managing director of Live Nation France, served as executive producer for Live Nation, whose CEO, Michael Rapino, is a long-time supporter of Global Citizen, while Anne Jérôme, from AJ Com'Conseil, was delegated by Global Citizen as the event director to coordinate the Paris project.

Stéphanie Nicolas explains his decision to appoint Dushow to oversee technical production for the event: "I didn't want hundreds of suppliers for logistical reasons. I leaned towards the Dushow Group as they were able to handle the majority of our requests, which meant I only needed to speak to a few personnel to ensure we were all focused on the same goal."

The fact Global Citizen Live was being broadcast around the world also meant Nicolas and Global Citizen needed a technical partner they could rely on, he adds: "Broadcast-focused shows are particularly challenging because all the timings are of the utmost importance and you have to think about camera angles and what the director wants to see."

"As this was primarily a broadcast event, resolution and screen quality were particularly important," echoes Cédric Frécon, LED technician for Alabama, the Dushow group company on display duties for the Paris concert, which, along with the other Global Citizen Live shows, was broadcast on six continents, as well as livestreamed online. "We needed the best screens possible to look good in front of the cameras."

The show featured two 79.2m² IMAG screens, comprising of Absen Altair (AT5 Pro) LED, flanking the stage, and Absen Polaris 3.9mm pixel pitch 'ticker screens' integrated into the STUFISH-designed stage which displayed messages throughout the performances. These LED screens complemented two further 4.2m x 2.4m Absen Altair LED screens on the far delay towers.

"It is a live show, of course, but we treated it as a broadcast event from the very beginning," confirms Alexandre Capponi, director of Dushow's audio department and head of sound for the Paris Global Citizen event.

From a sound perspective, the main challenge for Dushow was the site itself, and specifically location in central Paris. "Even with an audience of this size, the fact that we are in central Paris meant we were asked to bring the sound down to 99 dBA, 3dB less than the national limit," Capponi explains. The sound team were also prevented from using ground subs, "so, except for the front fills, we had to hang the entire system," he adds.

"The Meyer Sound system comprised left and right hangs with clusters of 16 LEO and 12 1100-LFC subwoofers, while each of the four delay towers were equipped with 12 LYON and six 1100-LFC", adds Capponi, who explains that the delays had to be positioned far enough away from the stage that they wouldn't appear in the broadcast.
